(888)330-2260

In Line Aeration Systems

No Tank Required

Theia offers systems which can add any level of dissolved oxygen to existing (or new) wastewater collection or discharge piping. The system takes in a slip stream of the main flow supersaturates it with oxygen and then mixes that supersaturated stream with the main flow. This approach is effective in eliminating or preventing Hydrogen Sulfide in the wastewater and head space as well as for driving up the Dissolved Oxygen levels prior to discharge for wastewater plants.
